- **DIE CAST ALUMINUM CASE**

INTRODUCTION

New from TruWave FX comes the Wave Screamer Overdrive pedal, featuring the **Classic Tones of Rock and Roll.** With our easy to use gain / tone/ volume control configuration you can dial up drive tones, from beautifully transparent to crunchy overdrive, with great sustain and mid range dynamics! The Wave Screamer delivers the **Boutique Experience** with a versatile, full, dynamic tone without breaking the bank. *YOU'VE HEARD ALL THE HYPE, NOW HEAR THE TONE!*

HOW IT WORKS

The Wave Screamer incorporates an all analog design architecture featuring stable FET bias voltages and classic diode clipping. This, accompanied with our HIGH GAIN STAGE will produce a consistent, full, drive tone with all the crunch and sustain your guitar could desire. The player will enjoy a wide gain range, allowing them to achieve tones from vintage color to full on overdrive, while still allowing chord harmonies to ring true. Pairing the Wave Screamer with your favorite tube amps gain stage will perform stunningly well, providing drive for days, without introducing mud. Our engineers have the experience to deliver 21st century technology, with performance and a price unmatched by our competitors, accounting for battery condition, a/c noise interference and electrically noisy environments. TruWave FX pedals deliver consistently superior performance and **WE GUARANTEE IT! If you don't like what you hear simply return the pedal within 30 days for your money back.** Have A Blast!
