- TRUE BYPASS
- 9 VOLT, LOW NOISE SUPPLY MAINTAINS SOUND QUALITY THROUGH OUT BATTERY LIFE CYCLE
- DIE CAST ALUMINUM CASE

INTRODUCTION

New from Truwave FX comes the Cannibal Distortion Pedal featuring state of the art **High Gain True Clip Technology with hardcore distortion unsurpassed in the industry.** With the easy to use Gain / Volume / Tone control configuration you can dial up high gain tones that will eat your face. The Cannibal offers the **Boutique Experience** with a versatile, full, dynamic tone without breaking the bank. **You've Heard All The Hype, Now Hear**

HOW IT WORKS

The CANNIBAL uses TruWave FX's revolutionary, all analog, True Clip Technology allowing your guitars signal to clip against extremely stable voltages, without hitting typical unstable Vcc or diode thresholds. This technological achievement will produce a consistent, full, distortion tone with all the crunch and swooping bandwidth your guitar could desire. The player will enjoy an extremely high gain range, allowing them to achieve all the tones of heavy metal, while still allowing chord harmonies to ring true. Pairing the Cannibal with your favorite tube amps distortion will perform stunningly well, providing distortion for days, without introducing mud. Our engineers have the experience to deliver 21st century technology, with performance and a price unmatched by our competitors, accounting for battery condition, a/c noise interference and electrically noisy environments. TruWave FX pedals deliver consistently superior performance and **WE GUARANTEE IT! If you don't like what you hear simply return the pedal within 30 days for your money back.** Have A Blast!
